Problem Solution Fit

Project Title

AI Learning Assistant Using Emotion Detection and Google Gemini AI

Existing Problem

Most online learning platforms provide the same learning experience to every student without understanding their emotional state. Students often feel confused, frustrated, or bored while learning and do not receive personalized guidance.

Proposed Solution

The AI Learning Assistant detects the learner's emotion from text input using trained BERT and BiLSTM models. Based on the detected emotion, the Google Gemini AI model generates personalized learning guidance and motivational suggestions.

Benefits

- Personalized learning support
- Better student engagement
- Emotion-aware recommendations
- Improved learning outcomes
- AI-powered educational assistance

Conclusion

The proposed solution enhances traditional e-learning by combining emotion detection with Generative AI to provide adaptive learning support.
