Project Planning

Project Title

AI Learning Assistant Using Emotion Detection and Google Gemini AI

Project Goal

To develop an intelligent learning assistant capable of detecting learner emotions and generating personalized learning guidance using Artificial Intelligence and Google Gemini API.

Project Timeline

Week 1

- Problem Identification
- Requirement Gathering
- Literature Survey

Week 2

- Dataset Collection
- Data Preprocessing
- Feature Engineering

Week 3

- Model Training using BiLSTM
- Model Training using BERT

Week 4

- Google Gemini API Integration
- Streamlit UI Development

Week 5

- Testing
- Bug Fixing
- Documentation

Week 6

- Demo Preparation
- Final Deployment
- Project Submission

Team Responsibilities

Team Leader

- Project Management
- GitHub Repository Maintenance
- Integration
- Documentation

Team Members

- Dataset Preparation
- Model Training
- UI Development
- Testing

Deliverables

- Source Code
- Trained Models
- Documentation
- GitHub Repository
- Demo Video
- Final Report

Expected Outcome

A fully functional AI-powered learning assistant capable of detecting learner emotions and providing personalized educational support.
